title : Electronic diagram `TWT jetting grid`

author: Dennis van Gils

Purpose: Control 112 solenoid valves @ 24 V by a single Arduino. We will use two Centipede boards (only one shown), each providing 64 digital outputs controlled over I2C. Each Centipede board will have 4 Sanwo MOSFET boards connected to them, each providing 16 channels. Hence, there is a total of 8 Sanwo MOSFET boards : https://github.com/Dennis-van-Gils/project-TWT-jetting-grid to control in total 112 (max 128) solenoid valves. We will work in groups of 14, because 8x14=112. Also, each of the 4 sides of the tunnel will house 2x14=28 valves. date : 23-11-2022 Cable management is easier this way. Hence, instead of populating all 16 channels per MOSFET board, we occupy only the first 14.
